Autonomous AI-Powered Regulatory Compliance

ZERO-CONTACT MICRO-SAAS · SOUTH AFRICA

ComplyStack

01

01 INTRODUCTION

What We're Building

ComplyStack (working title) is an autonomous compliance engine that turns a messy solar invoice into a fully completed, ready-to-sign municipal SSEG registration pack in seconds.

Rather than adding another manual step to an already broken bureaucratic process, process, ComplyStack removes the step entirely — reading, validating, and filing on the filing on the user's behalf, at the exact moment South African installers face a hard a hard regulatory deadline.

BUILT FOR

Solar EPCs & Electricians

Bulk-process historic installs before the deadline

Homeowners

Turn a technical quote into legal compliance

Municipalities

Receive clean, correctly formatted submissions

Our Vision

A world where regulatory compliance is instant, automatic, and never blocks someone from doing legitimate work — starting with the solar installers racing South Africa's SSEG deadline.

Our Mission

Give every installer and homeowner a zero-friction path from raw invoice to filed compliance pack — validating hardware against the official standard, generating the paperwork, and getting out of the way.

The Badge & Checkmark

We chose a sealed badge with a checkmark because it represents exactly what the product delivers: verified, government-grade government-grade compliance.

The rounded badge reads as a seal of approval — the same visual language as a certificate stamp — while the **checkmark** signals a validated, machine-checked result rather than a manual promise.

As the platform expands beyond solar into water compliance, POPIA, and carbon and carbon reporting, this same seal becomes the universal mark of a verified verified module.

ComplyStack

05
SECONDARY / APP ICON

The badge-only mark is used wherever space is square or constrained — app icons, favicons, social profile images, and in-product status badges.

Clear Space & Minimum Size

clear space = height of the checkmark (x)

Clear space

Keep an empty margin equal to the height of the checkmark stroke ("x") on all sides of the badge and wordmark. No text, edges, or other graphics may enter this zone.

Minimum size

Digital: 24px badge height, 90px full lockup width.

Print: 12mm badge height, 30mm full lockup width.

Below these sizes, use the badge alone.

Using the Mark Correctly

DO

- ✓ Use approved color combinations only
- ✓ Maintain minimum clear space
- ✓ Scale the badge and wordmark proportionally
- ✓ Use the badge alone in square/small spaces

DON'T

- ✗ Stretch, squash, or skew the badge
- ✗ Recolor the mark outside the palette
- ✗ Place it on busy or low-contrast backgrounds
- ✗ Add drop shadows, outlines, or effects

Typeface Family

Aa**Space Grotesk**

Used for all headings, section titles, and the wordmark. A geometric, technical sans that reflects precision and automation.

How Much of Each Color

Neutrals — 60%

Paper White & Cloud Gray carry every dashboard, form, dashboard, form, and document background. They keep They keep dense compliance data readable and calm. calm.

Navy & Blue — 30%

Compliance Navy anchors headings, navigation, and and primary buttons. Circuit Blue marks interactive interactive elements — links, active states, progress. progress.

Teal — 10%

Signal Teal is reserved for the logomark, key confirmations, and moments that say "this has been verified." Never used as a background.

Status colors (Approved / Unverified / Not Approved) are functional, not decorative — use them only to reflect real compliance state in the product UI.
